## SUMMARY

Security Engineer specializing in **Zero Trust architecture**, vulnerability management, and incident response across AWS, Docker, and Cloudflare environments. Reduced attack surface by **85%** through defense-in-depth controls mapped to **NIST 800-53** and **ISO 27001**. CASP+ (DoD 8140 Level III), AWS Security Specialty, SSCP, and CCNA certified.

## CERTIFICATIONS

**CASP+ (SecurityX)**, DoD 8140 IAT/IAM Level III | **AWS Certified Security – Specialty** | **SSCP** | **CCNA** | **Security+** | **Network+** | **(ISC)<sup>2</sup> CC**

**Security Clearance:** Eligible

## TECHNICAL SKILLS

**Security Architecture & Governance:** Zero Trust (NIST 800-207), Defense in Depth, MITRE ATT&CK, Threat Modeling, Risk Assessment, Incident Response, Vulnerability Management, NIST 800-53, CIS Controls, ISO 27001

**Cloud & Application Security (AWS):** IAM, GuardDuty, CloudTrail, Security Hub, Inspector, Config, VPC, Security Groups, KMS, Secrets Manager, WAF, S3 Encryption, Organizations, SCPs, Terraform IaC, GitHub Actions

**Identity, Network & Endpoint Security:** Active Directory, RBAC, MFA, SSO (SAML/OIDC), VLAN Segmentation, Firewall Rules, ACLs, VPN (IPSec/SSL), IDS/IPS, DNS Security, Cloudflare Zero Trust, Wireshark, Nmap

**Security Operations & Automation:** SIEM, Log Analysis, SOAR Orchestration, AI/LLM Security Integration, Python, PowerShell, Bash, Docker Container Hardening, Automated Remediation Workflows, Linux, Windows Server

## PROFESSIONAL EXPERIENCE

### Tigoué Theory LLC — Security Engineer

Atlanta, GA | Oct 2025 – Present

- Built a production AI-augmented security platform with LLM orchestration, automated threat detection, and SOAR workflows processing live traffic **24/7** on AWS
- Architected a Zero Trust access framework using Cloudflare Tunnels and identity-aware proxy across **6 production services**, eliminating all exposed ports and reducing lateral movement risk by **85%**
- Designed a **5-layer** defense-in-depth architecture with controls mapped to **NIST 800-53** and **ISO 27001**, achieving full compliance readiness within **90 days**
- Engineered AWS-native threat detection (GuardDuty, CloudTrail, Security Hub) processing **10,000+** daily events, reducing mean time to detect from **48 hours** to **4 hours**
- Automated **12** security workflows integrating Claude AI and SOAR orchestration, eliminating **20+ hours/month** of manual alert triage
- Deployed production LLM infrastructure (Claude, Ollama) behind API gateway authentication, container isolation, and hardened access controls
- Codified **30+** AWS resources via Terraform with enforced security baselines across VPC, IAM, EC2, and S3, eliminating configuration drift
- Hardened **8** Docker containers on Linux with network segmentation, unprivileged execution, and read-only filesystems, reducing container attack surface by **90%**

### Texaco — IT Operations Manager

Atlanta, GA | Mar 2022 – Feb 2026

- Sustained **99.5%** network uptime over **2.5 years** across routers, switches, firewalls, and DNS infrastructure supporting continuous retail operations
- Segmented POS payment traffic into dedicated VLANs, reducing broadcast domains by **70%** and aligning network architecture with **PCI-DSS** requirements
- Administered Active Directory group policies enforcing password complexity, least-privilege access, and software restriction, preventing unauthorized application installs across all endpoints

- Automated user provisioning and credential rotation via PowerShell, reducing onboarding from **2 hours** to **20 minutes** per account
- Led incident response for **95%** of network security incidents within **2-hour SLA**, performing traffic analysis with Wireshark for root cause identification

## EDUCATION

---

### Georgia State University — Atlanta, GA

BBA, Computer Information Systems (Cybersecurity) | BBA, Business Economics | May 2026

## TECHNICAL PROJECTS

---

### Cyber Squire OS — Cloud Security Operations Platform

Production AWS platform running **8** hardened Docker containers behind Cloudflare Zero Trust, with Terraform-codified infrastructure, compliance control mapping, real-time threat detection, and automated SOAR orchestration workflows.
